SUMMARY

Fullstack Software Engineer with 5+ years building scalable systems from scratch across React, Python, and Java stacks. Architected authentication systems serving 8+ enterprise platforms and led development of fintech and mobile products in cross-functional teams. Experienced mentoring engineers through technical architecture decisions, code reviews, and deployment best practices in microservices environments. Actively exploring Japan's tech ecosystem and preparing to relocate—committed to contributing to product-focused engineering teams while continuing Japanese language study.

TECHNICAL SKILLS

Frontend: React, TypeScript, Next.js

Backend: Django (Python), Spring Boot (Java), Node.js

Databases & Messaging: PostgreSQL, MongoDB, Redis, Kafka, Elasticsearch

Cloud & DevOps: AWS (EC2, Lambda, RDS, S3), Docker, Kubernetes, Jenkins

Testing & Tools: Playwright, Storybook, Mixpanel, Sentry, New Relic, Swagger

Workflow: Git, JIRA, Confluence, Figma, Agile (Scrum)

EXPERIENCE

Medikabazaar

Apr 2022 – Present

SDE 2

Gurugram, India

- Architected centralized User Access Management (UAM) system from scratch, consolidating authentication for 8+ enterprise platforms with SSO integration. With cross-functional team support, unified company-wide identity policies, enhanced security compliance, and reduced operational overhead across all business units.
- Took technical leadership responsibilities for 5-engineer team with manager support, driving architecture decisions, conducting code reviews, and mentoring junior developers on system design patterns. Collaborated with CTO's office on technical direction for new product initiatives.
- Took technical leadership responsibilities 5-person squad developing core fintech modules (Accounts Receivable, Payable, Invoicing, Credit Notes, Payment workflows) using React, Django, and Java Spring Boot in microservices architecture. Team delivered 60% automation of invoicing processes, streamlining financial operations.
- Built automated invoice processing system leveraging OpenAI's vision model for direct image-to-data extraction with structured output validation. Partnered with finance team to eliminate 80% of manual data entry and enhanced accuracy across financial reporting workflows.
- Built Medical Device Service Platform from scratch, creating ecosystem with 2 cross-platform mobile apps (Ionic and React + Django admin panel). Led 4-developer team through delivery, achieving 90% field operations adoption through improved offline usability.
- Engineered Seller Management Portal using React and Django, reducing onboarding time by 90% through optimized backend integrations. With operations team collaboration, automated compliance checks and document workflows, accelerating vendor acquisitions.
- Built and published internal React component library on NPM using Storybook and Chromatic. Library adopted by 50+ developers across 12 teams, improving rendering performance and reducing development time by 50%.
- Set up CI/CD pipelines using Jenkins for project deployments, integrated monitoring with Kafka, New Relic, and Docker on AWS, improving deployment reliability and system observability.
- Converted Figma designs into production-ready React components for all frontend projects, ensuring pixel-perfect implementation and maintaining design system consistency across multiple products.
- *Tech Stack: React, TypeScript, Django, Java Spring Boot, PostgreSQL, Redis, Kafka, AWS, Docker, Jenkins*

DrishteAI

Jul 2020 – Feb 2022

Software Engineer

Hyderabad, India

- Architected offline advertisement platform from scratch—similar to Google Ads—enabling campaign management across city-wide screens via NVIDIA Jetson Nano edge devices. Integrated computer vision models into backend workflows for content targeting and analytics.

- Led 3-person web development team to design and deploy complete ecosystem including real-time analytics dashboards, annotation tools, and campaign portals. Team delivered platform serving 10+ enterprise clients using React, Material-UI, and Django.
- Developed custom high-performance video player for Jetson Nano from scratch using Vanilla JS, WebSockets, and Django, optimized for seamless ad playback and transitions on edge devices.
- Designed and developed *Upasthiti*, facial recognition-based attendance system integrating computer vision models with React and Django. Successfully deployed for 10+ clients, automating attendance tracking with high accuracy.
- Managed end-to-end AWS cloud deployments and Docker-based infrastructure, ensuring high availability and scalability in fast-paced startup environment.
- *Tech Stack: React, Django, PostgreSQL, WebSockets, AWS, Docker, NVIDIA Jetson*

DrishteAI (Internship)

Jan 2020 – Jun 2020

Software Engineer Intern

Hyderabad, India

- Created interactive ad performance dashboards with React and Django, improving campaign monitoring capabilities for internal teams.

Developer Student Clubs (Google Developers) (Internship)

Feb 2019 – Jan 2020

Core Team Member

Greater Noida, India

- Conducted workshops on React, Node.js, and Django for 50+ students, mentoring on modern web development practices and project implementation.

Reliance Jio Infocom Limited (Internship)

May 2018 – Jul 2018

Software Intern

Gurgaon, India

- Built internal portal using React and Django to log and manage network infrastructure issues, improving incident tracking efficiency.

TECHNICAL INTERESTS & ACTIVE LEARNING

Generative AI: Building RAG (Retrieval-Augmented Generation) applications using LangChain and vector databases (Pinecone). Experimenting with OpenAI API integration, prompt engineering, and Model Context Protocol (MCP) servers for LLM orchestration. Exploring practical applications of AI tooling in engineering workflows.

EDUCATION

Bennett University

2016 – 2020

Bachelor of Technology, Computer Science (Specialization in AI/ML)

Greater Noida, India

ADDITIONAL INFORMATION

Languages: English (Professional), Japanese (Basic – actively preparing for JLPT N5)
